Users manageable through App	200
Operating temperature	-10°C ~ +50°C
Dimensions	165 x 44 x 22mm
Weight	450g
Power supply	12 ~ 18 Vdc

HeyOpen is a smart device for remote or local access control via PIN on keyboard or proximity card. The structure is in vandal-proof metal with IP66 protection for outdoors. HeyOpen is equipped with an anti-tampering buzzer and is compatible with Wiegand systems. On the body of the reader there is a button and an input for an external wired bell. Using WI-FI is not essential! It can also work as a

local reader by setting PIN or CARD. All the benefits and artificial intelligence are found when used in wi-fi. Thanks to the HeySmart app, you will have complete control over the reader which will allow you to manage users, their codes, RFID cards, the duration of the permit and the history of all entrances. HeyOpen is part of the HeySmart family and integrates into the app with all your devices.
